

Appian Announces Integration Partnership with Box for Deep Collaboration

May 13, 2020

No-code integration offers best-of-breed content management directly within Appian

MCLEAN, Va., May 13, 2020 (GLOBE NEWSWIRE) -- Appian (NASDAQ: APPN) today announced an integration partnership with Box, a leading cloud content management platform, to make enterprise collaboration more efficient, secure, and valuable. Users of Appian's [Low-code Automation Platform](#) can now seamlessly integrate with the Box platform for a wide variety of document-centric use cases in minutes with Appian's no-code Plug-In Connector.

The integration partnership unites Box's best-of-breed content management and security with Appian's industry-leading process management and security. The [Box Plug-in for Appian](#) can be downloaded for free in the Appian AppMarket by Appian customers.

Appian's heritage is optimizing business process workflows and case management for better collaboration, tracking, and auditability. Appian tracks process performance at a granular level for fast root-cause analysis of workflow bottlenecks. Low-code visual design enables effective process collaboration and instant deployment of business-driven process improvements. Appian's cloud architecture and operations deliver unrivaled scalability and reliability, with more security and data privacy accreditations than any competing vendor.

Integrating Box features directly in the Appian environment is fast and fluid due to the openness of both platforms. With no coding, processes can be configured to auto-generate new Box folders within the Appian interface. Content can be added to those folders by drag-and-drop or through auto-generation of Google Docs, allowing for further collaboration among users. All users can co-exist live in a document, all within the context of the larger business process at-hand.

"Box and Appian have a shared philosophy of building open and interoperable platforms that seamlessly work together to provide customers with choice," said Scott Porter, Vice President of Business Development at Box. "Combining Appian's native capabilities with Box's leading cloud content management platform provides the world's largest organizations with applications to manage, secure, and collaborate on their most important content."

"Making work better - more efficient, more valuable - means bringing the best available technologies together," said Marc Wilson, Senior Vice President, Global Partnerships and Industries at Appian. "That's what our integration partnership with Box is all about, and it exemplifies how easy this becomes when Appian is the central unifying platform."

Free trials of the Appian Low-code Automation Platform are available at <https://www.appian.com/platform/free-trial/>.
